

Are we muslims allowed to ask Questions?

↳ Yes, Islam encourages enquiry and seeking knowledge but with right intention and approach.

1. The Quran does not discourage all Qs

↳ Quran says:

Believers are those who believe in blind faith (bi'l ghayb)

↳ Here, 'bi'l ghayb' means trusting in what has been revealed by Allah.

↳ In Another, Allah says:

"Do not ask about things which, if made clear to you, may trouble you".

↳ This is warning against excessive OR unnecessary Questions

↳ These verses do not mean muslims cannot ask Questions. rather genuine Qs are not discouraged as shown by following instances

↳ When Allah announced the creation of mankind, some angels expressed concerns.

↳ Instead of admonishing them, He gave them a satisfactory answer

↳ When Moses said that Allah commanded them to sacrifice a heifer, then they asked alot of Questions about the age, color about it.

↳ Allah answered all of their Questions

Is it unscientific to believe in God?

Believing in the unseen is not unscientific, as science itself is based on accepting unseen realities that are inferred from logical reasoning and empirical evidence.

A clear example of this is gravity. No one has ever seen, touched, or directly sensed gravity. However, its effects—such as objects consistently falling to the ground—are observable. Scientists analyzed these observations and concluded that an unseen force must be acting on objects, leading to the formulation of Newton's Law of Universal Gravitation.

Similarly, many scientific concepts, such as electromagnetic waves, dark matter, and subatomic particles, were initially unseen but inferred from logical reasoning and indirect evidence before they could be experimentally verified.

Applying this reasoning to religious belief in the unseen (ghayb), one can argue that just because something is beyond direct sensory perception does not mean it does not exist. If strong logical arguments, historical evidence, and consistent experiences support a belief in certain unseen realities—such as God, the afterlife, and divine revelation—then these beliefs should not be dismissed simply because they are not directly visible.

Thus, rejecting unseen realities solely on the basis that they are not directly observable is an unscientific approach. True scientific thinking requires open-mindedness to examine the evidence and reasoning supporting any claim, whether it pertains to science or religious faith.

Sources of knowledge:

1. Intuition:

- ↳ We are born with knowledge of few things.

- ↳ We inherently know whole from a part, right from wrong, certain things as pleasing and others disgusting.

- ↳ It is claimed that God is part of our institutional knowledge.

2. Sense perception:

- ↳ Our five senses are another source of knowledge.

- ↳ Anything perceived through them are considered undeniable part of our knowledge.

- ↳ Another way we acquire knowledge is through experience of those before us or living in other parts of the world.

3. Intellect:

- ↳ Analyzing data through intuition, sense perception, and historical records to draw conclusions.
- ↳ If arguments are strong, then information is accepted as convincing piece of knowledge.

Divine Attributes:

1. Qudrat:

- ↳ There is harmony and order in creation.
- ↳ Everything, functioning of human body, growing of crops, follows a strict code of conduct.

2. Rububiyyat:

- ↳ Our surroundings are not a display of raw power but a good part of it serves us.
- ↳ The air we breathe, plants and crops, rainfall all happen within controlled system - performing in unison to ensure of our survival.

3. Rahmat:

- ↳ Humans love their worldly life.
- ↳ We don't do anything to get this.
- ↳ This all because of Allah's mercy

3. Hikmat

- ↳ Universe is not only orderly and arranged for our survival but also functions with intelligent design.
- ↳ This points to existence of a creator who has set everything in motion with great intelligence and wisdom.

Can we see Allah?

- ↳ Moses asked Allah to reveal himself to which replied to look at the mountain & if it remains place you can see me. When he manifested himself on it, it came down crashing.
- ↳ We can appreciate God by increasing our understanding of his attributes:
 1. All good imaginable attributes belong to him
 2. His attributes are perfect
 3. All these attributes are active at all times.
- ↳ Dhikr involves remembering God through understanding his attributes and observing them

Absurdness of science

- ↳ Science tells us the entire process of rainfall down to molecular reactions but not about who caused it to act like this.
- ↳ This is like narrating a story of the process of helping a man but leaving who helped him.
